

**Place value in numbers to 10million**

The position of the digit gives its value

Ten millions	Millions	Hundred thousands	Ten thousands	Thousands	Hundreds	Tens	Units
1	2	3	4	5	6	7	8

**Example**

The value of the digit '1' is 10 000 000

The value of the digit '2' is 2 000 000

The value of the digit '3' is 300 000

The value of the digit '4' is 40 000

**Round whole numbers**

**Example 1-** Round 634 679 to the nearest 10 000

- Step 1 - Find the 'rounding off digit' - 3
- Step 2 - Move one digit to the right - 4

4 or less? YES - leave 'rounding off digit' the same  
 - Replace following digits with zeros  
**ANSWER - 630 000**

**Example 2-** Round 345 679 to the nearest 10 000

- Step 1 - Find the 'rounding off digit' - 4
- Step 2 - Move one digit to the right - 5

5 or more? YES - add one to 'rounding off digit'  
 - Replace following digits with zeros  
**ANSWER - 350 000**

**Negative numbers**

4 > -4 → We say 4 is larger than -4

-4 < 4 → We say -4 is less than 4

Remember the rules:

- When subtracting go down the number line

When adding go up the number line

**Mental methods for addition**

- Start from LEFT to RIGHT

**Example 1** - think of:

55 + 44 as 55 + 40 + 4

- But in your head say:

55 95 99

**Example 2** - think of:

2347 + 536 as 2347 + 500 + 30 + 6

- But in your head say:

2347 2847 2877 2883

**Mental methods for subtraction**

**Example 1** - think of:

78 - 43 as 78 - 40 - 3

- But in your head say:

78 38 35

**Example 2** - think of:

2347 - 536 as 2347 - 500 - 30 - 6

- But in your head say:

2347 1847 1811

**Addition**

- Line up the digits in the correct columns

e.g. 64p + £3.29 + £8

$$\begin{array}{r} 0.64 \\ 3.29 \\ +8.00 \\ \hline \text{£}11.93 \\ \hline 1 \end{array}$$

**Subtraction**

- Line up the digits in the correct columns

e.g. 645 - 427

	H	T	U
	6	4	5
-	4	2	7
<hr/>			
	2	1	8

**Multiply numbers**

e.g. 264 x 32

**COLUMN METHOD**

$$\begin{array}{r} 264 \\ \times 32 \\ \hline 528 \\ 7920 \\ \hline \text{8448} \end{array}$$

**Divide numbers**

**Division using a formal method**

- **By a ONE-DIGIT number**

e.g.  $9138 \div 6$

$$\begin{array}{r} 1526 \\ 6 \overline{)9138} \\ \underline{54} \phantom{00} \\ 13 \phantom{00} \\ \underline{12} \phantom{00} \\ 18 \\ \underline{18} \\ 00 \end{array}$$

- **By a TWO-DIGIT number**

**LONG DIVISION METHOD**

$4928 \div 32 =$   
(Except write down some of your tables down first)

32  
64  
96  
128  
160

Divide  
Subtract  
Bring down - Make a new number  
Divide ...  
e.g.  $4928 \div 32$

$$\begin{array}{r} 0154 \\ 32 \overline{)4928} \\ \underline{-32} \phantom{00} \\ 172 \\ \underline{-160} \\ 128 \\ \underline{-128} \\ 000 \end{array}$$

$4928 \div 32 = 154$

**With a remainder also expressed as a fraction**

$$\begin{array}{r} 028 \\ 15 \overline{)432} \\ \underline{-30} \phantom{0} \\ 132 \\ \underline{-120} \\ 12 \end{array}$$

ANSWER -  $432 \div 15 = 28 \text{ r } 12$   
 $= 28 \frac{12}{15}$

**With a remainder expressed as a decimal**

$$\begin{array}{r} 028.8 \\ 15 \overline{)432.0} \\ \underline{-30} \phantom{0} \\ 132 \\ \underline{-120} \\ 12 \end{array}$$

$$15 \overline{)432.8} = 28.8$$

ANSWER -  $432 \div 15 = 28.8$

**Order of operations**

- B**racket
  - I**ndices
  - D**ivide
  - M**ultiply
  - A**dd
  - S**ubtract
- Do these in the order they appear
- Do these in the order they appear

e.g.  $3 + 4 \times 6 - 5 = 22$

$(2 + 1) \times 3 = 9$

↑ first

↑ first

**Factors, multiples & primes**

- **FACTORS** are what divides exactly into a number

e.g. Factors of 12 are:      Factors of 18 are:

1	12
2	6
3	4

1	18
2	9
3	6

The common factors of 12 & 18 are: 1, 2, 3, 6,  
The Highest Common Factor is: 6

- **PRIME NUMBERS** have only TWO factors

e.g. Factors of 7 are:      Factors of 13 are

1	7
---	---

1	13
---	----

So 7 and 13 are both prime numbers

- **MULTIPLES** are the times table answers

e.g. Multiples of 5 are:

5	10	15	20	25	.....
---	----	----	----	----	-------

Multiples of 4 are:

4	8	12	16	20	.....
---	---	----	----	----	-------

The Lowest Common Multiple of 5 and 4 is: 20

**Equivalent fractions**

- To simplify a fraction

Example:  $\frac{27}{36}$

First find the highest common factor of the numerator and denominator - which is 9, then divide

$$\frac{27}{36} \div 9 = \frac{3}{4}$$

- To change fractions to the same denominator

Example:  $\frac{3}{4}$  and  $\frac{2}{3}$

Find the highest common multiple of the denominators - which is 12, then multiply:

$$\frac{3}{4} \times 3 = \frac{9}{12} \text{ and } \frac{2}{3} \times 4 = \frac{8}{12}$$

**Add & subtract fractions**

- Make the denominators the same

e.g. $\frac{1}{5} + \frac{7}{10}$ $= \frac{2}{10} + \frac{7}{10}$ $= \frac{9}{10}$	e.g. $\frac{4}{5} - \frac{2}{3}$ $= \frac{12}{15} - \frac{10}{15}$ $= \frac{2}{15}$
--	---

Do not add denominators

**Multiply fractions**

- Write 5 as  $\frac{5}{1}$
- Multiply numerators & denominators

e.g. $5 \times \frac{2}{3}$ $= \frac{5}{1} \times \frac{2}{3}$ $= \frac{10}{3} = 3\frac{1}{3}$	e.g. $\frac{4}{5} \times \frac{2}{3}$ $= \frac{8}{15}$
--	---

**Divide fractions**

- Write 5 as  $\frac{5}{1}$
- Invert the fraction after ÷ sign
- Multiply numerators & denominators

e.g. $\frac{2}{3} \div 5$ $= \frac{2}{3} \times \frac{1}{5}$ $= \frac{2}{15}$	e.g. $\frac{4}{5} \div \frac{2}{3}$ $= \frac{4}{5} \times \frac{3}{2}$ $= \frac{12}{10} = 1\frac{2}{10} = 1\frac{1}{5}$
---	---

**Fraction of quantity**

- $\frac{4}{5}$  means  $\div 5 \times 4$

e.g. To find  $\frac{4}{5}$  of £40  
 $\frac{4}{5}$   
 $\text{£}40 \div 5 \times 4 = \text{£}40$

**Multiply/divide decimals by 10, 100**

thousands	hundreds	tens	units	•	tenths	hundredth	thousandt
4	3	5	2	•	6	1	7

- To multiply by 10, move each digit one place to the left

e.g.  $35.6 \times 10 = 356$

Hundreds	Tens	Units	•	tenths
	3	5	•	6
3	5	6	•	

- To divide by 10, move each digit one place to the right

e.g.  $35.6 \div 10 = 3.56$

Tens	Units	•	tenths	hundredths
3	5	•	6	
	3	•	5	6

- To multiply by 100, move each digit 2 places to the left
- To divide by 100, move each digit 2 places to the right

**AN ALTERNATE METHOD**

Instead of moving the digits  
 Move the decimal point the opposite way

**Multiply decimals**

- Step 1 - remove the decimal point
- Step 2 - multiply the two numbers
- Step 3 - Put the decimal back in

**Example:**  $0.06 \times 8$   
 $\Rightarrow 6 \times 8$   
 $\Rightarrow 48$   
 $\Rightarrow 0.48$

**6/11 Divide decimals**

- Use the bus shelter method
- Keep the decimal point in the same place
- Add zeros for remainders

**Example:**  $6.28 \div 5$

$$\begin{array}{r} 1.256 \\ 5 \overline{) 6.280} \\ \underline{5} \phantom{.} \phantom{0} \\ 12 \phantom{.} \phantom{0} \\ \underline{10} \phantom{.} \phantom{0} \\ 28 \phantom{.} \phantom{0} \\ \underline{25} \phantom{.} \phantom{0} \\ 30 \phantom{.} \\ \underline{30} \\ 0 \end{array}$$

**Percentage of quantity**

- Use only
- 50% -  $\frac{1}{2}$
  - 10% -  $\frac{1}{10}$
  - 1% -  $\frac{1}{100}$

A percentage can also be calculated by using long multiplication and dividing the answer by 100

**Example:** To find 35% of £400

- 10% = £40
- 20% = £80
- 5% = £20
- 35% = £140

**Fraction, decimal, percentage**

**equivalents**

**LEARN THESE:**

$\frac{1}{4} = 0.25 = 25\%$	$\frac{3}{4} = 0.75 = 75\%$
$\frac{1}{2} = 0.5 = 50\%$	$\frac{1}{10} = 0.1 = 10\%$

**Percentage to decimal to fraction**

$27\% = 0.27 = \frac{27}{100}$   
 $7\% = 0.07 = \frac{7}{100}$   
 $70\% = 0.7 = \frac{70}{100} = \frac{7}{10}$

**Decimal to percentage to fraction**

$0.3 = 30\% = \frac{3}{10}$   
 $0.03 = 3\% = \frac{3}{100}$   
 $0.39 = 39\% = \frac{39}{100}$

**Fraction to decimal to percentage**

$\frac{4}{5} = \frac{80}{100} = 80\% = 0.8$

Change to 100

$\frac{3}{8} = 3 \div 8 = 8) 3.000 = 0.375 = 37.5\%$

$\frac{9}{12} = \frac{3}{4} = 0.75 = 75\%$

Cancel by 3

**Similar shapes**

When a shape is enlarged by a scale factor the two shapes are called SIMILAR shapes

Scale factor =  $6 \div 3 = 2$   
 Length a =  $5 \times 2 = 10\text{cm}$   
 Length b =  $8 \div 2 = 4\text{cm}$

**Express missing numbers**

**algebraically**

An unknown number is given a letter

**Examples**

$2a - 4 = 8$   $2a = 12$  so  $a = 6$

$b + 32 = 180$  so  $b = 148^\circ$

$18 + c = 30$  so  $c = 12$

$3d = 360^\circ$  so  $d = 120^\circ$

**Use a word formula**

Example: -Time to cook a turkey

Cook for 45min per kg weight

Then a further 45min

For a 6kg turkey, follow the formula:

$$45\text{min} \times 6 + 45\text{min}$$

$$= 270\text{min} + 45\text{min}$$

$$= 315\text{min}$$

$$= \underline{5\text{h } 15\text{min}}$$

**Number sequences**

- Understand position and term

Position	1	2	3	4
Term	3	7	11	15

Term to term rule = +4

Position to term rule is  $\times 4 - 1$

(because position  $1 \times 4 - 1 = 3$ )

nth term =  $n \times 4 - 1 = 4n - 1$

- Generate terms of a sequence

If the nth term is  $5n + 1$

$$1^{\text{st}} \text{ term } (n=1) = 5 \times 1 + 1 = 6$$

$$2^{\text{nd}} \text{ term } (n=2) = 5 \times 2 + 1 = 11$$

$$3^{\text{rd}} \text{ term } (n=3) = 5 \times 3 + 1 = 16$$

**Possible solutions of a number sentence**

Example: x and y are numbers

$$\text{Rule: } x + y = 5$$

Possible solutions: x = 0 and y = 5

$$x = 1 \text{ and } y = 4$$

$$x = 2 \text{ and } y = 3$$

$$x = 3 \text{ and } y = 2$$

$$x = 4 \text{ and } y = 1$$

$$x = 5 \text{ and } y = 0$$

**Convert units of measure**

**METRIC**

When converting measurements follow these rules:

- When converting from a **larger unit to a smaller** unit we **multiply** ( $\times$ )
- When converting from a **smaller unit to a larger** unit we **divide** ( $\div$ )

**UNITS of LENGTH**

$$10\text{mm} = 1\text{cm}$$

$$100\text{cm} = 1\text{m}$$

$$1000\text{m} = 1\text{km}$$

**UNITS of TIME**

$$60\text{sec} = 1 \text{ min}$$

$$60\text{min} = 1 \text{ hour}$$

$$24\text{h} = 1 \text{ day}$$

$$365\text{days} = 1 \text{ year}$$

**UNITS of MASS**

$$1000\text{g} = 1\text{kg}$$

$$1000\text{kg} = 1\text{tonne}$$

**UNITS of VOLUME**

$$1000\text{ml} = 1 \text{ litre}$$

$$100\text{cl} = 1\text{litre}$$

**Convert units of measure**

**METRIC/IMPERIAL**

LEARN: 5 miles = 8km

**Perimeter and area of shapes**

Shapes can have the SAME area but different perimeters

The area of each shape is 9 squares

Perimeter of each shape is different

A - 12; B - 14; C - 16

**Area of parallelogram & triangle**

**Area of parallelogram**

$$\text{Area of parallelogram} = b \times h$$

$$= 8 \times 5$$

$$= \underline{40\text{cm}^2}$$

**Area of triangle ( $\frac{1}{2}$  a parallelogram)**

$$\text{Area of triangle} = \frac{b \times h}{2}$$

$$= \frac{8 \times 5}{2}$$

$$= \underline{20\text{cm}^2}$$

**Volume**

○ **Volume of cuboid**

Volume =  $l \times w \times h$   
 =  $5 \times 3 \times 2$   
 =  $30\text{cm}^3$

○ **Volume of cube**

Volume =  $l \times w \times h$   
 =  $3 \times 3 \times 3$   
 =  $27\text{m}^3$

**Construct 2D shapes**

Example : Triangle with side and angles given

- Draw line AB = 7cm
- Draw angle  $34^\circ$  at point A from line AB
- Draw angle  $47^\circ$  at point B from line AB
- Extend to intersect the lines at C

**Construct 3D shapes**

**CUBE & its net**

**CUBOID & its net**

**TRIANGULAR PRISM & its net**

**Properties of shapes**

**TRIANGLES - sum of angles =  $180^\circ$**

**ISOSCELES triangle**  
 2 equal sides & 2 equal angles

**EQUILATERAL triangle**  
 3 equal sides & ALL angles  $60^\circ$

**SCALENE triangle**  
 All sides & angles different

- Sum of exterior angles is always  $360^\circ$

- interior & exterior angle add up to  $180^\circ$

- the interior angles add up to:

Triangle	= $1 \times 180^\circ = 180^\circ$
Quadrilateral	= $2 \times 180^\circ = 360^\circ$
Pentagon	= $3 \times 180^\circ = 540^\circ$
Hexagon	= $4 \times 180^\circ = 720^\circ$

**Parts of a circle**

- The circumference is the distance all the way around a circle.
- The diameter is the distance right across the middle of the circle, passing through the centre.
- The radius is the distance halfway across the circle.
- The radius is always half the length of the diameter. ( $d = 2 \times r$ ) or ( $r = \frac{1}{2} \times d$ )

**Position on a co-ordinate grid**

**Angles and straight lines**

- Angles on a straight line add up to  $180^\circ$

$$148^\circ + 32^\circ = 180^\circ$$

- Angles about a point add up to  $360^\circ$

$$146^\circ + 90^\circ + 124^\circ = 360^\circ$$

- Vertically opposite angles are equal

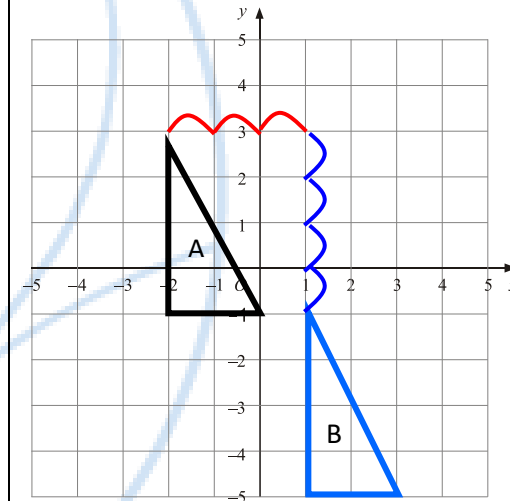

**Transformations**

- **Translation** - A shape moved along a line

Example - Move shape A 3 right & 4 down

Can also be written as a vector  $\begin{pmatrix} 3 \\ -4 \end{pmatrix}$  Right Down

Notice:

- The new shape stays the same way up
- The new shape is the same size

○ Reflect a shape in x-axis

○ Reflect a shape in y-axis

Graphs

○ Pie chart

Transport	Frequency	Angle
Car	13	$13 \times 9 = 117^\circ$
Bus	4	$4 \times 9 = 36^\circ$
Walk	15	$15 \times 9 = 135$
Cycle	8	$8 \times 9 = 72$

Total frequency = 40  
 $360^\circ \div 40 = 9^\circ$  per person

○ Line graph

Line graphs show changes in a single variable - in this graph changes in temperature can be observed.

The mean

The mean is usually known as the average.  
 The mean is not a value from the original list.  
 It is a typical value of a set of data

Mean = total of measures ÷ no. of measures

e.g.- Find mean speed of 6 cars travelling on a road

- Car 1 - 66mph
- Car 2 - 57mph
- Car 3 - 71mph
- Car 4 - 54mph
- Car 5 - 69mph
- Car 6 - 58mph

$$\begin{aligned} \text{Mean} &= \frac{66+57+71+54+69+58}{6} \\ &= \frac{375}{6} \\ &= 62.5\text{mph} \end{aligned}$$

Mean average speed was 62.5mph
